

Sales Attribution & Credit Assignment

A governed foundation for seller credit, split ownership, effective-dated history, and monthly interim payment values.

Quick product summary

One controlled workflow for assigning seller credit from customer + product group through payment review.

Replaces spreadsheet/email ambiguity with auditable assignments, validation, approvals, and export-ready outputs.

P1 FOUNDATION

Assignment + validation ready

PAYMENT VALUES

P1 FEATURE SET

Built around the five client-priority capabilities.

01 Customer + product group credit

Assign sellers at the precise grain where selling relationships and product responsibility are managed.

02 Split allocations

Support shared ownership, including 80/20 or other direct seller splits that must validate cleanly.

03 Role-aware credit

Handle Direct, Overlay, LPS/Farm Gate, and Manager Roll-up behavior without hardcoding the workflow.

04 Effective-dated history

Preserve start/end dates so current and historical credit logic remains explainable.

05 Monthly interim payments

Generate reviewed interim values from credited invoice amounts while final true-up remains separate.

PRODUCT WORKFLOW

The story is simple: set the rules, validate, approve, calculate, then review payment values.

Setup

Sellers, roles, customers, products

Assign

Customer + product allocation %

Validate

Split totals, limits, dates

Approve

Manager review with audit trail

Calculate

Invoice credit by seller

Payments

Monthly interim values

Assignment stores allocation percentage; invoice transactions store quantity, unit, amount, and invoice date.

BUSINESS IMPACT

For Sales Operations

Less spreadsheet reconciliation and clearer ownership rules for complex selling relationships.

For Managers

Approval decisions are backed by validation results, assignment detail, and audit history.

For Finance

Credited invoice amounts roll into monthly interim payment values for review.

Client takeaway

This is not a static prototype. It is a demo-ready sales credit foundation that can expand into integrations, payroll review, and production-grade persistence.

Implementation Progression, Summary Highlights & Next Steps

Structured around what is demo-ready now, what a pilot should harden, and what production can extend.

Implementation narrative

The current POC is demo-ready. Pilot and production expansion should be driven by stakeholder feedback.

MVP

Demo-ready foundation

Implemented P1 workflow

- **Assignment grain**
Customer + product group credit ownership.
- **Split validation**
Direct split totals, LPS limits, overlay behavior.
- **Approvals**
Manager review with approval history.
- **Credit calculation**
Invoice amount/quantity allocated by seller.
- **Payments**
Monthly interim values and true-up reserve.

Pilot

Client validation sprint

Harden the operating model

- **Data load**
CSV import and repeatable refresh process.
- **Role fit**
Confirm real-world direct, overlay, LPS rules.
- **E2E testing**
Automate create, validate, approve, calculate.
- **Security**
Replace demo role switcher with Entra ID.
- **Persistence**
Move from SQLite demo data to managed database.

Scale

Integration-led rollout

Production roadmap

- **Workday**
Seller, manager, employee, and payroll mapping.
- **SAP/JDE/SAC**
Invoice, product, customer, quantity, amount feeds.
- **Salesforce**
Account visibility and assignment publishing.
- **Power BI**
Approved outputs for reporting and leadership views.
- **Payroll review**
Governed handoff to final payment workflows.

SUMMARY HIGHLIGHTS

Clear ownership

Every credit rule is anchored to customer, product group, seller, role, percentage, and dates.

Validation before approval

Split issues are surfaced before they can affect credit calculation or payment review.

Payment-ready outputs

Monthly interim payment values are generated from calculated credited amounts.

Audit confidence

History and approvals show who changed what, when, and why.

CALL TO ACTION

1

Review

Walk through the live demo and confirm the business story.

2

Validate

Confirm role rules, split logic, and effective-date examples.

3

Prioritize

Select pilot hardening items and integration sequence.

4

Pilot

Approve a focused pilot plan and success criteria.
